

Virtual Testing of critical systems in the Lab: OKTAL-SE signs a partnership with Synopsis Corporation

OKTAL-SE and Synopsis Corporation have signed an exclusive agreement for the development of advanced solutions for virtual testing of radar and electronic warfare systems.

The engineering company Synopsis Corporation is a World leader in radar and electronic warfare systems testing. OKTAL-SE is a World leader in synthetic environment modeling and physics-based sensor simulation.

Through this agreement, solutions developed by Synopsis Corporation for many years will benefit from OKTAL-SE high-fidelity software simulation products to raise the realism level of its virtual testing offer.

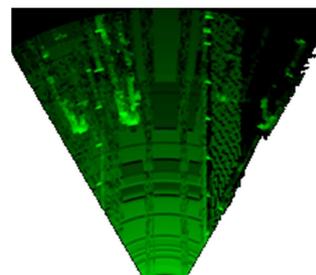

This tight coupling leads to a unique opportunity to put high-fidelity and performant virtual testing solutions on both Defense and Automotive markets.

For OKTAL-SE, this partnership is an opportunity to reinforce its position in HWIL simulation by extending it to radar applications.

Synopsis Corporation will benefit from OKTAL-SE experience in physical modeling of synthetic environment.

Thanks to this agreement, unique solutions will be available in the military and autonomous vehicle growing markets with a first release early in 2021.
